Requirements for print

Requirements for print

You wish to design your own print? If so, take the following into account in your design:

- The file must be delivered as follows:
    - Preferably a high resolution PDF, EPS vector file.
    - Photos in TIF or EPS with minimum resolution of 150 dpi on 100%.
    - Always convert fonts to letter contours/outlines/curves.
    - Colours: CMYK (RGB and PMS colours must be converted to CMYK). Conversion to CMYK can cause a colour deviation. So where possible, base your design on CMYK.
    - Vor Adobe programes we suggest using prepress 'Europe, prepress 3'
    - Colour profile CMYK: Coated FOGRA39 (ISO 12647-2:2004)
    - Colour profile RGB: AdobeRGB(1998)
- Ensure a bleed of 5 mm (maximum gross panel size: 1510x3010 mm).
- Maximum nett dimension of the printed panel: 1500x3000 mm.
- The delivered print files are always checked by our DTP department. If any part of the design needs to be modified, you will be informed accordingly. You board will only be produced after you have approved the modification.
- Extra costs are calculated if files need to be drasticlty modified because they are not delivered according to the specifications.
